

belton®

Spray paint
for designing,
decorating
and repairing

Spray paint – as colourful as life

Spray paint is the simple, fast and sustainable way to bring colour into your life. So many applications, so many ideas, so many technical solutions from belton:

- Creation and design
- Protection of objects
- Paint repairs
- Upcycling
- Marking and signage

Colour illustrations are not binding. They may differ for printing reason.

Spray paint has a future

belton products are full of good ideas: In particular, we ensure that the spray paint can keeps getting better technologically and ecologically. This is what we are known for, because you won't easily find more know-how and experience than in our company when it comes to spray paint.

Technical

At belton, the research and development of new paint spray solutions and quality standards is our top priority.

Independent

With the spray paint can, work can start straight away. No connections, no electricity, no tools needed.

Creative

A wide variety of product combinations and types of application offer numerous possibilities for you to become creative.

High quality

Only high-quality raw materials and components are used in the belton range.

Versatile

In the extensive belton spray paint range, you will find a solution for every surface and every application.

Recyclable

The emptied spray paint can can be fully recycled. Tinplate and plastic are returned to the material cycle.

Less material

Just get started with the spray paint can. Without mixing cup, brush, roller or scraper grid.

Ecological

We are constantly researching, developing and realising new ways to make our products more and more environmentally friendly.

Durable

Spray paint cans can usually be used for longer than 5 years. Without dried or soiled paint residues.

Water-based paint

purecolor is the technology brand from Kwasny, which stands for the development of water-based spray paints.

We are pursuing ambitious goals with our sustainability strategy. This is one of the reasons why we succeeded in producing environmentally friendly spray paints.

Step by step

Preparation

01

Painting safety

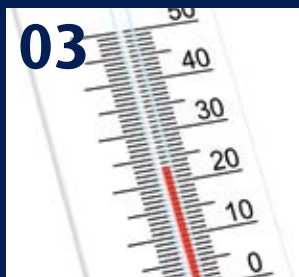

- Wear gloves, protective mask and goggles when spray painting
- Thoroughly mask and cover the area around the object to be painted

02

Painting environment

- Painting can be carried out indoors and outdoors, paying attention to weather conditions, good air supply and health protection
- Ventilate well indoors and wear protective mask
- Do not paint in windy conditions

03

Ambient temperature

- Ideal temperature between 15 - 25°C
- Possible temperature between 5 - 35°C
- At cool temperatures the paint dries slower, at high temperatures it dries faster
- Dry air is more suitable for spray painting

04

Pre-treatment of the substrate

- The object to be painted must be clean, dry and free of grease, use cleaner if necessary
- Sand the surface to improve the adhesion of the top coat

05

Primer

- Information on whether priming should be carried out can be found at www.belton.de or on the spray paint label

06

Spray lock and protection cap

- Before painting for the first time, remove the spray guard or valve protection cap with a screwdriver

07

Shake can

- Shake the spray paint can well before applying the first coat
- Shake for approx. 2 min. starting from the point you hear the mixing balls rattle
- Information on how to properly shake the paint up is given on the spray paint can's label

08

Test spraying

- Test spray on a separate object or an inconspicuous spot on the object to be painted
- Check the colour shade and the function of the spray paint can

Painting

Start of painting

- Always start painting outside of the paint object to avoid overcoating

Paint application

- Paint evenly thin layers
- Alternate between vertical and horizontal after each coat
- Pause 3 - 10 minutes between coats

Alignment of the spray can

- Hold the spray paint can as vertically as possible

Painting speed and distance

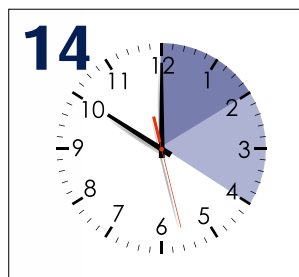

- Ensure an even spraying speed and equal spraying distance (approx. 15 - 30 cm)
- Information on the ideal distance can be found on the spray paint can label

Follow-up steps

Empty the valve

- After use, turn the spray paint can upside down and spray until the valve is empty and only propellant gas comes out

Observe drying times

- Precise information on drying times can be found on the spray paint can's label

Overcoating

- Overcoat with clear coat if the object to be painted is outside, frequently touched or subjected to mechanical or physical stress
- The spray paint can's label contains information on overcoatability
